There are five verb roots in this data: *gör*, *atf*, *yet*, *kır*, and *yaz*.

There are a lot of inflections on these roots. List them **all**, give their meanings, and indicate how they are used together (i.e, describe their order of occurrence).

List all the allomorphs for each morpheme and give their conditioning environments, **or** state general rules that predict all the allomorphy.

Note: Ignore contractions in the glosses — they're used only to save space.
